

Fertile Hatching Eggs / Unsexed Chicks

We provide fertile eggs for people to hatch at home, either under a broody hen or in an incubator. Eggs are available all year round, although the best fertility rates occur between February and October. Hatching eggs at home is a fantastic experience and lots of people and Schools buy their fertile eggs from us. Ideally you will come and collect the eggs from us here in Essex, but we do post eggs all around the Country – and as far afield as USA, Portugal, France etc. Although we carefully wrap the eggs, we cannot be held responsible (or send replacements) for those that are damaged in the post (though our experience is that most eggs do arrive safely).

A note about broody hens...

Hens will often go 'broody' around Spring/Summer. This is when they feel the strong desire to hatch eggs and produce chicks. Some breeds go broody more than others and you can often encourage hens to go broody by placing 6-8 golf balls in a straw nest for a week. A broody hen will sit tight in the nest box and stick its feathers up like an angry cat if you try to move it. You should separate a broody hen to hatch away from other hens, a rabbit hutch works well. When the chicks hatch, then feed mum and chicks on chick crumb. Mum will do it all herself! Mum can be removed at 6 weeks.
